

Please amend abstract as follows:

A method for the manufacture of a biocompatible porous prosthesis ~~comprising~~ including the steps of applying a solution to a porous support structure for a prosthesis, ~~said the~~ solution ~~comprising~~ including a biocompatible block copolymer ~~including~~ which includes one or more elastomeric blocks and one or more thermoplastic blocks, and a first solvent capable of dissolving ~~said the~~ copolymer; and applying a second solvent capable of dissolving ~~said the~~ first solvent but incapable of dissolving ~~said the~~ copolymer to the surfaces of ~~said the~~ prosthesis and thereby causing ~~said the~~ copolymer to precipitate onto ~~said the~~ support structure.
